The Full Focus Method: Smooth your skin with the foam applicator. The Easy-to-Use Method: Smooth your face with the foam applicator. The Instant-On Method: Add a small amount to your face and wait for a few minutes for the foam to harden.Q: Using a combobox to drop down a list of values that also keep a list of values in a hidden table Currently I have a combobox that allows the user to select any one of several groups. My combobox is displaying the name of the group but in the group table, I have a list of the members. I have the database setup to search a hidden table if the group name matches what is selected in the combobox and return the names of all the members, in that list. It works fine if I select a single value but if I select multiple values it shows the names of all the members for every group. How can I modify this so that I can show the members in a list of their own? Here is the code: If CB1.Value = "" Then MsgBox "Please select a group name!" Exit Sub Else 'Check if there is a group selected Dim gName As String gName = CB1.Value 'Get all the names of the selected members Dim members() As String members = GetSelectedGroupMembers(gName) 'Fill the group table Fill 82157476af
